Windows Embedded CE Workshop

Description

The Windows Embedded CE Workshop by F&S offers a quick and effective start into handling the operation and configuration of all F&S platforms. The content is split in three parts. First, you get and introduction to the operating system Windows Embedded CE (architecture and features). In the second part you learn how to start the platform and how to configure it. For this purpose, F&S offers system software (NBoot, EBoot, Kernel) tasks and features, as well as drivers and tools. In the end we are going to show you how to program software for our RISC-based product families, how to run, test and debug them.

Appointments

Appointmens are made upon request. Please call our Sales department +49 (0) 711 123722-0, or send an e-mail to sales@fs-net.de.
